Mark and Beth,

Following up from our discussion this morning concerning the AB900 Acknowledgment Letter for this project:

I reviewed the current Greenhouse Gas Emission studies for the Rugged Solar and Tierra Del Sol project sites. No significant impacts are currently identified related to greenhouse gas emissions, thus no mitigation measures are proposed. The studies currently indicate these projects would result in a net reduction of approximately 175,000 metric tons of carbon dioxide emissions. If this remains the case, I would not anticipate the County would be responsible for imposing project conditions related to the AB900 certification.

I also spoke with Piu Ghosh (project manager for the City of Cupertino) concerning the Apple 2 Campus project in that jurisdiction. She stated that no mitigation measures resulted from the AB900 certification process, which the City would have to impose. She does expect the City to impose conditions related to construction emissions that result from the air quality / EIR analyses that are being conducted.

Please let me know if you have any further questions.

Thanks,
